REASONS FOR ALLOWANCE

The following is an examiner's statement of reasons for allowance: the prior art neither discloses nor makes obvious an apparatus and method for determining the existence of a blowout precursor in a combustor by receiving pressure data measured by an acoustic pressure device, and performing at least one of a spectral analysis, a statistical analysis, and a wavelet analysis on the pressure data and determining the existence of a blowout precursor based thereupon.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Lucenko et al and Snyder et al are the most relevant prior art. Lucenko et al discloses detecting combustor blowout by monitoring the pressure signal and determining a pressure derivative signal indicative of the rate of change in the sensed pressure over successive time intervals. Snyder et al discloses forecasting blowout by monitoring the magnitude of the pressure signal.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Charles G. Freay whose telephone number is 571-272-
